

Optimal Rail and Infrastructure Oversight with SAP Business One®

Since its inception in 2016, STIMIO has developed IoT B2B solutions to increase uptime, optimize maintenance costs, and avoid costly service disruption for the railway sector, infrastructure, and industrial assets. Solutions are designed in a modular, user-friendly, scalable way geared at easy deployment in the field, combining mechanical and software engineering, wireless telecommunications, and data analysis. Assets are able to monitor continuously and remotely in real-time and therefore can predict failures, analyze abnormal behavior, and provide insight into root causes for problem-solving and better corporate decision-making.

Before: Challenges and Opportunities

- Seeking a scalable ERP capable of growing while interfaced with clients and suppliers
- Aiming to expand further in Europe and globally without incurring typical start-up “growing pains”
- Requiring a system to streamline financials and production-related aspects of manufacturing

Why SAP and OPTI ONE

- Solution based in the Cloud avoids the need for additional infrastructure
- Solution provides greater round-the-clock accessibility
- Partner ensured smooth implementation in a practical and efficient manner
- Partner demonstrated extensive know-how and expertise
- Partner deemed highly responsive, efficient, and fully satisfied client expectations

After: Value-Driven Results

- Fully integrated solution provides management with better decision-making tools and oversight
- Optimized accounting, invoicing, bank operations and stock management
- 24/7 accessibility with more accurate data in real-time for simplified reporting and planning

“Stimio seeks to make its expertise available to clients within the railway and infrastructure markets in Europe and worldwide, and to accomplish all this, Stimio is very happy to have a tight-knit partnership with SAP Business One.

Julien Bordet, Chief Operating Officer, Stimio

ISO 9001 Certified

for the design, manufacturing and marketing of IoT electronic and radio based solutions within the B2B market.
